

### GAM310 Preparing for the Future

### Procedural Content Generation

#### What is PCG?

# What is procedural content generation (PCG)?

- Procedural: by computer program or algorithm, with little or no direct input from designer or user
- ► Content: levels, maps, art, animations, stories, items, quests, music, weapons, vehicles, characters, ...
- ► Generation: creating stuff

#### Types of PCG

- Online
  - Generate content at run-time
  - Part of the game
- ▶ Offline
  - Generate content at design-time
  - Tool for developers

#### $PCG \neq randomness$

- Many PCG systems use random numbers, but randomness in itself is not PCG
- Can have PCG without randomness, e.g. based on fractals or simulations
- Randomness in PCG is generally constrained to produce desired content
- Shuffling a deck of cards for a game of Solitaire is not PCG!

#### Not to be confused with...

- ► Procedural Rhetoric / Procedurality (Bogost)
- "the art of persuasion through rule-based representations and interactions, rather than the spoken word, writing, images, or moving pictures"
- ► There: "procedural" = "rule-based"
- ▶ Here: "procedural" = "algorithmic"

# Why PCG?

- More content for less development effort
- ▶ Decrease development costs
- ► Increase replayability
- ► Decrease storage requirements
- Allow game mechanics based on unseen content

Noor Shaker, Julian Togelius and Mark J. Nelson. Procedural Content Generation in Games: A textbook and an overview of current research. Springer, 2016. Available online: http://pcqbook.com

# A brief history of PCG

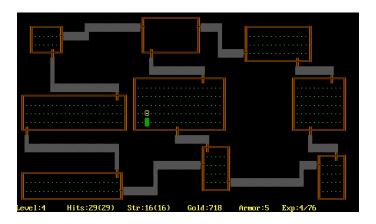

# Dungeons & Dragons (1974)

# Beneath Apple Manor (1978)

# Rogue (1980)

# Elite (1984)

 $8\times256=2048\ planets$ 

# Sid Meier's Civilization (1991)

# Frontier: Elite II (1993)

# The Elder Scrolls II: Daggerfall (1996)

Roughly half the size of Great Britain

# SpeedTree (2002)

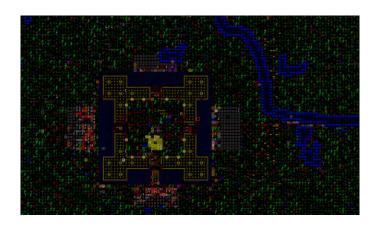

# .kkrieger (2004)

Full FPS game in 96kb

# Dwarf Fortress (2006)

# Spelunky (2008)

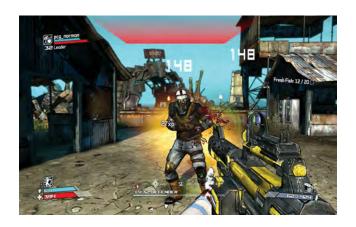

# Spore (2008)

# Left 4 Dead (2008)

# Borderlands (2009)

# Minecraft (2011)

Many times bigger than surface of Earth

# The Binding of Isaac (2011)

# To That Sect (2013)

# Elite: Dangerous (2014)

# Road Not Taken (2014)

#### PROCJAM (2014–present)

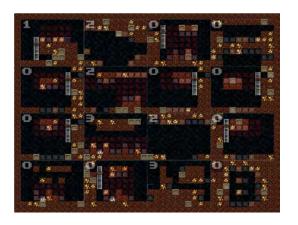

# No Man's Sky (2016)

A selection of PCG techniques

# Combining hand-authored blocks

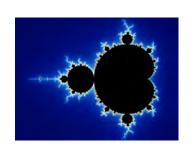

http://tinysubversions.com/spelunkyGen2/

#### Perlin noise

- A "smooth" random number generator
- Often used for terrain generation
- ► 2D: use as height map
- ➤ 3D: apply threshold to generate caves

#### Fractals

- Some simple mathematical formulae can give rise to complex emergent structures
- E.g. the Mandelbrot set: generated by iteration of the formula

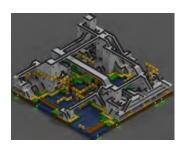

$$z_{i+1} = z_i^2 + c$$

# L-Systems

- Fractals based on repeated replacement of characters in a string representation
- A simple model of plant growth

### Wave Function Collapse

- Places tiles (2D or 3D)
   based on constraints on which tiles can be adjacent
- An example of constraint solving (similar to e.g. solving Sudoku)

#### *n*-gram models

- Gather frequency data for sequences of length n in some training data
- A basic form of machine learning
- E.g. can train on letters to generate names
- ► E.g. can train on words to generate (nonsense) text
- E.g. can train on tiles to generate levels

The role of PCG in games

#### Lessons from No Man's Sky

```
User reviews:
RECENT: Overwhelmingly Negative (16,433 reviews)
OVERALL: Mostly Negative (69,022 reviews)
```

- If you overscope, pray that you don't have to cut any features that you announced on stage at E3...
- ► PCG is not a substitute for gameplay
- PCG is not magic it doesn't (by itself) let an indie-sized team produce a AAA game
- When talking about scale and PCG, it's easy to set unrealistic expectations

#### Big numbers

- "Over 18 quintillion planets"
- $\triangleright$  2<sup>64</sup> = 18 446 744 073 709 551 616
- ▶ What does this number even **mean**?
- What it really means: "our random number generator uses a 64-bit seed"
- They could have said "a near infinite number of planets"
- They could easily have made it "over 340 undecillion" planets (2<sup>128</sup> = 340 282 366 920 938 463 463 374 607 431 768 211 456)

#### Even bigger numbers

▶ There are

52! = 80 658 175 170 943 878 571 660 636 856 403 766 975 289 505 440 883 277 824 000 000 000 000

ways of shuffling a deck of playing cards

- When you shuffle a deck, it is almost certain that no deck of cards in human history has ever existed in that order
- ▶ But how interesting is that particular shuffled deck?
- ▶ How different from another shuffled deck?

### Uniqueness

"I can easily generate 10,000 bowls of plain oatmeal, with each oat being in a different position and different orientation, and *mathematically speaking* they will all be completely unique. But the user will likely just see a lot of oatmeal."

- Kate Compton

http://galaxykate0.tumblr.com/post/139774965871/so-you-want-to-build-a-generator

#### Uniqueness

"`Every Planet Unique' might mean that each planet has a complex sci-fi backstory rich enough to fill a two-part Star Trek episode. It might also mean that, mathematically speaking, there's a rock somewhere on the planet that doesn't look like any other rock in the universe."

— Michael Cook

http://www.gamesbyangelina.org/2016/08/procedurallanguage/

#### Lessons from Spelunky

```
User reviews:

RECENT: Very Positive (55 reviews)

OVERALL: Very Positive (6,031 reviews)
```

- ▶ PCG can complement solid game mechanics
- PCG can enable new (discovery-based) game mechanics
- ► No need to dazzle the audience with big numbers

#### Curation

- Human creators constantly ask themselves: is this any good?
- Smart PCG should not merely generate: it should also evaluate

#### **Authorship**

- ▶ In a game with emergent narrative, who is the author? Is it the developer, the player, or both?
- ▶ In a game with procedurally-generated content, who (or what) is the author? Is it the developer, the player, the system, or all three?

#### **Authorship**

"(We) create the systems (including some fixed content), and the choices made at that stage are influenced by our preferences, worldviews, talents and flaws, and then the system creates the content. The players are exposed to the content and can manipulate it using the tools we (and others) create for them. How they use the tools is up to them, and how the content reacts is up to our systems."

— Tarn Adams

http://www.nullpointer.co.uk/content/interview-dwarf-fortress/

The future of PCG

"You are playing an "open world" game, something like Grand Theft Auto or Skyrim. Instead of going straight to the next mission objective in the city you are in, you decide to drive (or ride) five hours in some randomly chosen direction. The game makes up the landscape as you go along, and you end up in a new city that no human player has visited before. In this city, you can enter any house (though you might have to pick a few locks), talk to everyone you meet, and involve yourself in a completely new set of intrigues and carry out new missions. If you would have gone in a different direction, you would have reached a different city with different architecture, different people and different missions. Or a huge forest with realistic animals and eremites, or a secret research lab, or whatever the game engine comes up with."

#### - Julian Togelius

## Whole game generation

- ► E.g. ANGELINA (Michael Cook)
- Generate entire games from scratch, possibly using ideas or themes provided by the user
- Democratise game design
   create games in
   collaboration with a
   non-skilled user
  - (i.e. make it so that you don't need to do a degree to learn how to make games...)

### Deep learning

- Artificial neural networks (ANNs)
- Already used for tournament-level game AI, image classification, language translation,...
- Generative Adversarial Networks (GANs)
  - https:
    //www.youtube.com/
    watch?v=G06dEcZ-QTq

#### Computational creativity

- Open question: can an Al system be creative?
- ► Beyond mere generation
- Beyond generating content to generating ideas

# **Activity**

#### Activity

- Forum activity on LearningSpace
- ► Go to https://www.randomlists.com/random-video-games and choose a game
- Imagine adding PCG to this game
  - What type of PCG would enhance the game?
  - What other changes to mechanics would be needed to rebalance the game?
  - Would PCG change the aesthetics of the game?
  - Would PCG change the target audience of the game, or how the game is marketed?
- If the game already has PCG, imagine removing it instead
- Please post one idea yourself, and also comment on at least three ideas from your peers
